

Lean Expert

Target

To successfully establish Lean Management in a company, you will need professionals who have a comprehensive knowledge and experience with Lean methods. This deepening course is based on the principal Lean methods and enables the participants to learn more extensive methods of Lean Management in order to successfully initiate the Lean projects.

Training Priorities

The awareness for detection of wastes will be sharpened and trained. Several methods for stabilization of processes are taught using exercises and practical examples

Methods

- Initiation and control of lean projects
- Value stream analysis and mapping as the basis for selected practices
- Introduction of stable work processes(e.g. Poka Yoke, standardization, job design, SMED)

Target Participants

Professionals and managers with Lean experience who already know the basic Lean methods and want to expand and deepen their methodological skills.
